

STAR JYOTISH

Career Intelligence Report

Final Product & UX Blueprint

A comprehensive blueprint for a personalized Vedic astrology career product serving students, early-career users, experienced professionals, senior leaders, entrepreneurs, and people navigating career transitions.

Core product principle

Astrology + Current Career Context + User Intent = Personalized Career Intelligence

Prepared for Star Jyotish • July 2026

1. Executive Product Definition

The Star Jyotish Career Report should not be a static horoscope or a long AI essay. It should be a **personalized Career Intelligence experience** combining structured Vedic astrology analysis with the user's current professional reality and the specific career question they are trying to solve.

The product must work equally well for a 21-year-old asking “What career should I choose?” and a 42-year-old asking “Why has my career progression slowed?” The birth chart provides the astrological foundation; current profession, career stage, and current concern determine how findings are prioritized and explained.

Context → Astrology → Interpretation → Timing → Decision Support → Action → Follow-up AI

The report should feel like a guided consultation rather than a document. Users move from a high-level answer to supporting astrological evidence, practical implications, and targeted follow-up questions.

2. Product Goals

- Make the user feel that the report understands their current career situation—not merely their birth chart.
- Answer five questions: Who am I professionally? What should I do? How can I grow? When are major changes likely? What should I do next?
- Serve career starters and experienced professionals without forcing everyone through the same narrative.
- Use D1, D10 and other relevant divisional charts intelligently, without overwhelming users.
- Make astrological reasoning transparent and drillable while keeping the default experience easy to understand.
- Convert a one-time report into an ongoing career companion through live updates and AI follow-up questions.
- Keep astrology calculations deterministic and structured; use the LLM for interpretation, personalization, explanation, and conversation.

3. Target User Segments & Dynamic Report Modes

User segment	Primary need	Report emphasis
Student / Pre-career	Choose direction	Career discovery, education, fields, first-job direction, skills, foreign education/career
0–3 years experience	Build foundation	Early growth, specialization, first promotion, job stability, career direction
Experienced professional	Progress and recognition	Current alignment, promotion, stagnation, leadership, job change, career ceiling
Senior / Executive	Authority and next chapter	Leadership, influence, seniority, strategy, advisory work, entrepreneurship, second career
Entrepreneur / Business owner	Business success	Entrepreneurship, timing, partnerships, risk periods, wealth creation
Career transition	Make a change	Current vs future direction, transition timing, risk, new-field suitability
Job seeker / Career break	Return or restart	Re-entry timing, suitable roles, stability, relocation, confidence-building direction

4. Input & Onboarding Flow

The input flow should be short, progressive, and context-aware. Do not ask users to complete a long career questionnaire before showing value. Use 4–6 compact steps, with optional deeper questions only when they

materially improve the report.

Page	Purpose	Required fields	UX notes
1. Birth Profile	Confirm astrology data	Name; DOB; exact birth time; birthplace; existing profile data	Reuse saved Star Jyotish profile. Show birth-time confidence if available.
2. Career Stage	Understand where the user is	Student; 0–3 years; experienced; senior leadership; entrepreneur; career break; job seeker; transition; freelancer	Single-select. Include Other.
3. Current Profession	Anchor report to reality	Current role/profession; optional industry; optional years of experience	Searchable role input + free text. Do not force rigid taxonomy.
4. Current Career Concern	Identify intent	Select up to 3 concerns	Multi-select. Drives report ordering and modules.
5. Optional Context	Improve precision	Employer type; location/relocation; job change; business/partnership; education plans	Only show relevant follow-ups.
6. Report Preferences	Control depth	Quick view; full report; deep analysis	Default Full Report. Expand later.

Recommended Career Concern options

- Am I in the right career?
- How far can I progress?
- When will my career improve?
- Why do I feel stuck?
- Will I get promoted?
- Should I change my job?
- Should I change my profession?
- Should I move into management or leadership?
- Should I start a business?
- Will I have strong financial growth?
- Are foreign opportunities or relocation favorable?
- What is the next major turning point in my career?

Key rule: Current profession is context, not evidence. The system must never infer that a profession is astrologically suitable merely because the user currently works in it. Compare the current role with chart-derived strengths and show alignment, partial alignment, or underutilized potential.

5. Report Information Architecture & Navigation

The report should be a persistent application experience with a left or top navigation rail, a sticky “Ask Career AI” action, and a visible section indicator. On mobile, use compact bottom navigation or horizontally scrollable section tabs.

Nav item	What user sees	Primary action
Overview	Career Snapshot	Understand the big picture in 2–3 minutes
Current Career	Current Career Phase + Alignment	See how astrology relates to current situation
Career DNA	Strengths, work style, leadership	Understand professional nature
Career Directions	Fields, roles, job vs business	Explore suitable paths
Growth	Promotion, recognition, leadership	Understand progression
Money	Income and wealth themes	Understand financial career potential
Challenges	Obstacles and risk alerts	See what to watch
Timing	Dasha + transit career timeline	See when things may change
Roadmap	Now / 12 months / 1–3 years / 3–5 years	Convert insights into direction
Astrological Evidence	D1 / D10 / D2 / relevant Vargas	Inspect reasoning
Ask Career AI	Suggested and custom questions	Go deeper

Global navigation rules

- Every major insight card has a “Why?” or “Go Deeper” action.
- Every timing item is clickable and opens the underlying astrological explanation.
- Every section ends with 2–4 relevant next questions.
- “Ask Career AI” remains accessible throughout the report.
- Users can update current profession or concern; show when a refresh is required.
- Show report last updated and astrological data last calculated timestamps.
- Never bury the core conclusion behind technical astrology.

6. Page-by-Page UX Blueprint

Page 1 — Career Report Cover / Entry

- Hero: “Your Career Intelligence Report”
- Subline: personalized using birth chart + career context
- Name, report date, current profession, career stage
- Primary CTA: Start Your Career Journey
- Secondary: View 2-minute Career Snapshot
- Small disclaimer: astrology is guidance, not certainty.

Page 2 — Career Snapshot

- Most important page for immediate value.
- Top cards: Career Potential, Leadership, Entrepreneurship, Career Stability, Financial Growth.

- Top 5 strengths and top 3 career watch-outs.
- Current career theme.
- Next major career window.
- One-line conclusion: “Your strongest career direction is...”
- CTA: Explore My Current Career / View Full Analysis

Page 3 — Your Current Career

- Show current profession and career stage.
- Current Career Phase: Foundation / Expansion / Consolidation / Transition / Leadership / Reinvention.
- Current role vs chart-indicated strengths.
- Career Alignment score with explanation.
- Underutilized potential.
- For experienced users: “Why your career may feel stuck” when relevant.
- For students: “What your chart suggests you should explore.”

Page 4 — Career DNA

- Professional identity narrative.
- Analytical, creative, communication, leadership, discipline, risk, adaptability, strategy, people skills.
- Use visual scores only when generated by deterministic rules.
- Each trait: assessment, why, practical implication.
- CTA: See how strengths map to careers.

Page 5 — Career Strengths & Weaknesses

- Top strengths with evidence.
- Potential weaknesses and workplace manifestations.
- Career-specific recommendations.
- Avoid generic personality labels.

Page 6 — Career Directions

- Rank top 5 career fields.
- For each: alignment, why, suitable roles, work environment, watch-outs.
- Show current profession within ranking where relevant.
- Allow “Compare two paths.”

Page 7 — Job vs Business vs Entrepreneurship

- Visual comparison across stability, leadership, wealth potential, risk, independence, long-term suitability.
- Clear recommendation with caveats.
- Partnership vs solo business.
- Timing overlay.

Page 8 — Leadership & Work Style

- Individual contributor vs manager vs strategist.
- Management style.
- Autonomy vs structure.
- Ideal team/environment.
- Potential conflict patterns.
- Senior users get dedicated executive interpretation.

Page 9 — Career Growth & Promotion

- Growth trajectory.
- Promotion and recognition themes.
- Authority and responsibility.
- Career ceiling / next level.
- Preferred move: vertical, lateral, leadership, specialization.

Page 10 — Money & Career

- Income growth potential.
- Wealth accumulation style.
- Stable vs variable income themes.
- Business income where relevant.
- Use D2 selectively.
- Never promise exact salary or guaranteed wealth.

Page 11 — Career Challenges & Risk Alerts

- Top career obstacles.
- Severity and likelihood.
- How each may manifest.
- What to do about it.
- Time-bound risk alerts.
- Avoid fear-based language.

Page 12 — Career Timing

- Current Mahadasha / Antardasha context.
- Career-relevant transit synthesis.
- Best opportunity windows.
- Caution windows.
- Clickable timeline.
- Use meaningful date ranges, not false precision.

Page 13 — Career Decision Center

- Job change.

- Promotion.
- Career switch.
- Entrepreneurship.
- Foreign opportunity.
- Relocation.
- Each: Favorable / Mixed / Caution + timing and reasoning.

Page 14 — Astrological Evidence

- D1: career foundation.
- D10: professional destiny and career expression.
- D2: wealth/income where relevant.
- D9: strength/maturity where useful.
- D24: education/learning where relevant.
- D27: capabilities where relevant.
- D4: relocation/settlement where relevant.
- D60 only when birth-time reliability supports it.
- Progressive disclosure: simple summary first, technical detail on expansion.

Page 15 — Career Roadmap

- Now.
- Next 12 months.
- 1–3 years.
- 3–5 years.
- Top 3 actions.
- Top 3 things to avoid.
- Suggested next career question.

Page 16 — Ask Career AI

- Suggested prompts personalized to user intent.
- Custom question input.
- Conversation grounded in the same astrology dataset and Career Profile.
- Follow-up without regenerating the whole report.
- Show source context: “Based on your D1, D10, current dasha and career profile.”

7. Detailed Page Design System

Use a premium editorial dashboard style rather than a traditional horoscope/PDF aesthetic. Star Jyotish's gold/red/white brand direction can be expressed through restrained accents, generous whitespace, clear cards, and strong typography.

Component	Recommended design	Purpose
Hero insight	Large statement + 2–3 supporting metrics	Immediate clarity
Insight card	Title, conclusion, evidence, implication, CTA	Progressive disclosure
Score	0–100 only when rules-based; otherwise Low/Medium/High	Avoid fake precision
Timeline	Horizontal or vertical dated milestones	Career timing
Alignment card	Current role vs chart strengths	Experienced users
Evidence drawer	Planet/house/chart/dasha explanation	Transparency
Risk alert	Short headline + period + action	Useful caution without fear
AI prompt chip	One-click question	Encourage exploration
Chart view	Simple visual + plain-language interpretation	Astrology literacy without overload

Visual hierarchy

- Level 1: What does this mean for me?
- Level 2: Why does Star Jyotish say this?
- Level 3: What should I consider doing?
- Level 4: What astrological factors support this?
- Level 5: Technical chart detail.

8. Depth Model: Three Levels

Level	Target user	Content	Expected time
Quick View	Everyone	Snapshot, current phase, top strengths, key timing, one recommendation	3–5 min
Full Report	Default	Core sections, D1/D10, timing, growth, decisions, roadmap	20–30 min
Deep Analysis	Power users / Premium	Planet-by-planet, D10 deep dive, detailed dasha periods, year/month timing, scenario analysis, advanced evidence	45+ min / ongoing

Recommended default: Generate the Full Report by default, but lead with a 2-minute Snapshot. Users should never be forced to read linearly; support scanning, drilling down, and asking questions.

9. Astrology Data Architecture

Use a deterministic astrology layer and an LLM interpretation layer. The LLM should not independently calculate planetary positions, houses, dashas, yogas, or divisional charts.

Layer	Responsibility
Astrology Engine	Planetary positions, houses, lords, dignities, yogas, D1/D2/D9/D10/D24/D27/D4 as relevant, dasha periods, transits, timing windows.

Layer	Responsibility
Interpretation Engine	Normalize findings into structured signals: career strength, leadership, entrepreneurship, promotion, job change, foreign career, risks, timing.
Career Context Engine	Store current profession, industry, career stage, experience, concerns, location/relocation intent, job/business context.
LLM Presentation Engine	Turn structured signals + user context into concise, personalized explanations and follow-up answers.
Validation Layer	Check contradictions, unsupported claims, missing data, birth-time sensitivity, and confidence levels before output.

Chart priority: Primary—D1, D10, D2. Secondary—D9, D24, D27. Conditional—D4 and D60. Use only charts relevant to the user's question; do not expose every chart simply because it is available.

10. Dynamic Module Selection

User intent	Prioritize these modules
"Am I in the right career?"	Career Alignment; Career DNA; Directions; Current Career; Roadmap
"I feel stuck"	Current Career Phase; Growth; Challenges; Timing; Decision Center
"Will I get promoted?"	Growth; Leadership; Timing; Current Career
"Should I change jobs?"	Current Career; Timing; Decision Center; Risks
"Should I start a business?"	Job vs Business; Entrepreneurship; Money; Timing; Risks
"Should I move abroad?"	Foreign Career; Relocation; Timing; Career Directions
"What career should I choose?"	Career DNA; Directions; Education; Early Career; Timing
"I want to become a leader"	Leadership; Growth; Career Alignment; Timing

11. Career AI Follow-Up Experience

The report becomes significantly more valuable when it evolves into an ongoing conversation. The AI should operate on the same structured astrology and Career Profile data used to generate the report.

Suggested prompts should be personalized. Examples:

- Why do I feel stuck in my current career?
- Am I ready for a promotion?
- Should I move from technical work into management?
- Is this a good period to change companies?
- Would entrepreneurship suit me better than my current job?
- What should I focus on in the next 12 months?
- Compare my current career path with entrepreneurship.
- What does my D10 suggest about leadership?
- Which of my career strengths am I underusing?
- Explain my next major career turning point.

Premium feature: Career Scenario Analysis

Allow users to describe real decisions such as two job offers, relocation, business partnership, or switching industries. Compare the scenario against the user's chart, timing, and Career Profile, while clearly framing the output as astrological guidance rather than guaranteed prediction.

12. Career Roadmap Design

Horizon	Content
Now	Current phase, active themes, immediate focus
Next 12 months	Top opportunities, caution periods, recommended focus
1–3 years	Career direction, promotion/leadership, major transitions
3–5 years	Long-term positioning, seniority, entrepreneurship or second-career themes
Action plan	3 things to focus on; 3 things to avoid; 3 questions to revisit

13. Recommended Career Context Data Model

Store Career Profile separately from raw astrology calculations so the same chart can support different reports and future updates.

```
{
  career_stage: experienced_professional,
  current_profession: Software Engineering Manager,
  industry: Technology,
  years_experience: 15,
  career_concerns: [progression, promotion, leadership],
  job_change_considered: true,
  entrepreneurship_interest: false,
  foreign_opportunity_interest: false,
  relocation_interest: false,
  report_depth: full
}
```

14. Quality & Trust Rules

- Never make guaranteed predictions.
- Never fabricate astrological evidence to justify an LLM conclusion.
- Separate calculated facts from interpretation.
- Show confidence or sensitivity when birth time materially affects a conclusion.
- Use meaningful date ranges rather than false day-level precision.
- Do not overwhelm users with Sanskrit terminology unless they expand technical evidence.
- Explain contradictory signals instead of hiding them.
- Do not let current profession bias the astrology engine.
- Do not use a score unless its methodology is deterministic and consistent.
- Use fear-free language for challenging periods.
- Distinguish astrology-based guidance from professional financial, medical, legal, or employment advice.
- Allow users to update career context and regenerate only affected interpretive layers.

15. Free vs Premium Product Strategy

Free / Preview	Premium / Full Career Intelligence
Career Snapshot	Full report
Top 3 strengths	Complete Career DNA
Top 3 career fields	Top 5 fields + role mapping
Current career phase	Current Career Alignment
One major timing window	Full career timeline
Basic D1 summary	D1 + D10 + relevant divisional analysis
2 AI questions	Unlimited / fair-use Career AI
No scenario analysis	Job/business/offer/relocation scenario analysis
Basic roadmap	Detailed 3–5 year roadmap

16. Recommended MVP Build Order

Phase	Build
Phase 1	Career Profile inputs; Career Snapshot; Current Career; Career DNA; Career Directions; D1/D10; basic timing
Phase 2	Growth; Leadership; Challenges; Roadmap; dynamic module selection; evidence drawers
Phase 3	Career AI; suggested prompts; personalized follow-ups; live report updates
Phase 4	Scenario analysis; job offer comparison; business vs job; relocation analysis; premium deep dives

17. Final Recommended User Journey

Step 1: User opens Career Report.

Step 2: Star Jyotish reuses saved birth data.

Step 3: User selects career stage.

Step 4: User enters current profession.

Step 5: User selects up to 3 current career concerns.

Step 6: Star Jyotish calculates structured career astrology signals from D1, D10, D2 and relevant charts.

Step 7: Interpretation engine combines astrology with Career Profile.

Step 8: LLM creates the personalized Career Intelligence Report.

Step 9: User starts with Career Snapshot.

Step 10: User explores Current Career, Career DNA, Directions, Growth, Money, Challenges and Timing.

Step 11: User opens Astrological Evidence when they want deeper reasoning.

Step 12: User receives a practical Career Roadmap.

Step 13: User asks Career AI follow-up questions.

Step 14: User returns periodically for Career Updates as timing and context evolve.

The product promise should be:

“Star Jyotish does not just tell you what your chart says about career. It helps you understand what your chart means for the career you are actually living—and what you may want to consider next.”

This is the recommended north star for the Career Intelligence product. The report should be comprehensive enough to satisfy a user after the first reading, but modular and interactive enough that the user can continue exploring without generating another generic report.
